

DATE: June 16,2022

TO: OPRA DATA REIPIENTS

On June 14, 2022, a single NMS network leaf switch experienced an unexpected reboot, shortly before OPRA GTH start of day at 8:15 PM, causing participant input and multicast lines to disconnect, which in turn prevented data input and dissemination. All affected lines reconnected by approximately 8:20:44 PM and OPRA GTH operated without further issue for the remainder of the normal processing window. The root cause of the underlying issue was a hardware issue.
